

# SANUSI IBRAHIM

AI Backend Developer

Akure, Nigeria | 08063649519 | techbyfemi@gmail.com | buildwithfemi.vercel.app | github.com/techbyFEMI

## SUMMARY

---

Builds backend systems that remove the manual, error-prone parts of commerce and operations — guaranteed payments, automated order flow, AI agents that act instead of just chat. Ships end-to-end (FastAPI, PostgreSQL, LangGraph, Render/Vercel/Neon) while completing a Data Science degree at FUTA.

## EXPERIENCE

---

**AI Backend Developer (Independent)** | *Self-directed / freelance*

*Ongoing*

- Design and ship LangGraph-based AI agents with FastAPI backends, PostgreSQL/SQLAlchemy data layers, and Pydantic-validated schemas, deployed on Render (backend) and Vercel (frontend) with Neon for managed Postgres.
- Run coherence and architecture audits on shipped systems before adding features — e.g. identified and fixed 5 architectural bugs in a production commit pipeline (missing ownership checks, ID collisions, fragile matching logic, hardcoded values, dead code paths) with verified test evidence.
- Rebuilt a document-processing pipeline from a Node.js/Express/MongoDB prototype into an async FastAPI service, using AsyncOpenAI and asyncio.gather for concurrent processing and profiling (Scalene) to find and fix bottlenecks.

## SELECTED PROJECTS

---

**CMPDx (Goal Architect)** | *Squad-based accountability platform for daily study habits*

- FastAPI / Supabase / React app with a ReAct-pattern LangGraph agent that reads user stats and proposes plan changes via a tap-to-confirm UI; built a six-tier leaderboard system, SSE activity feed, and Nigerian-phone-normalized contact search.
- Ran a coherence audit across twelve gamification mechanics and cut six that didn't hold up, simplifying the ranking logic to completion rate, streak, then all-time points.

**CampusPay** | *Prepaid campus fintech platform*

- FastAPI + async SQLAlchemy 2.0 + PostgreSQL (Neon) system removing cash dependency and queue time from student-vendor transactions: students fund a persistent virtual account and lock payment in escrow, vendors get a guaranteed payment signal before preparing an order and release funds via QR scan on fulfillment.
- Built an automated background engine (Nomba API, Firebase) that expires and refunds uncollected orders every 60 seconds.

**GARD** | *AI contract-risk agent for freelancers*

- FastAPI + OpenRouter + PostgreSQL agent that reads freelance contracts, flags hidden risks, unfair clauses, and payment traps, and suggests replacement language for each flagged clause.

## SKILLS

---

**Languages & Frameworks:** Python, FastAPI, SQLAlchemy, Pydantic, LangGraph

**Data & Infra:** PostgreSQL, Redis, Neon, Render, Vercel, Supabase

**AI/LLM Tooling:** LangGraph agent design (ReAct pattern), OpenRouter, AsyncOpenAI, prompt/tool-loop architecture

**Practices:** Async concurrency, profiling (Scalene), architectural/coherence audits, PWA fundamentals

## EDUCATION

---

**B.Sc. Data Science (in progress)** | Federal University of Technology, Akure (FUTA)

*Expected 2030*
